

Mohammad Qaseem

Profile Summary

Senior Backend Engineer with 7+ years of experience designing and building scalable, high-concurrency backend systems, microservices, and e-commerce platforms. Strong expertise in the Python ecosystem (FastAPI, Django) and Node.js (Fastify, Express.js, NestJS) with deep experience in order management systems and distributed architectures. Proven track record of engineering low-latency REST APIs, optimising MySQL, MongoDB, Elasticsearch, and Redis workloads, and building reliable cloud-native solutions on AWS (EC2, S3, SQS, Route 53). Experienced in end-to-end system design, event-driven architectures, CI/CD automation, API security (JWT, OAuth 2.0), and performance optimisation for high-scale production systems.

Notable Projects

OurShopee – Order Management & Event-Driven Integration Platform

- Engineered a centralized Order Management System (OMS) and CRM in Python, automating invoice generation, shipping label processing, and return/replacement eligibility logic for a high-concurrency GCC marketplace serving 20k daily users.
- Orchestrated event-driven, asynchronous processing pipelines using AWS SQS and Bull Queue for high-throughput fulfillment tasks, incorporating cron-driven scheduling and strict message deduplication for FIFO queue integrity, processing 15k jobs daily.
- Integrated ZIWO IVR for automated customer call flows, implementing retry management (3-call limit logic) and secure webhook payload processing.
- Built a bidirectional data synchronization pipeline between the internal OMS and Zoho CRM via REST APIs, maintaining real-time consistency of customer profiles across systems.

AurumWiseX – Financial Data Platform for Neo-Realty Investment

- Established backend infrastructure and RESTful APIs from inception for a neo-realty investment platform, laying the architectural foundation for scalable, high-concurrency workloads.
- Modeled high-performance financial data structures in MongoDB, supporting flexible schema evolution for investment and transaction records.
- Integrated Apache Kafka for event-driven, asynchronous data streaming, enabling real-time propagation of financial state changes across services.

Hamleys India – Retail Platform Cloud Infrastructure

- Translated business requirements into backend architecture for high-traffic web and mobile e-commerce platforms, developing core APIs to support multi-channel retail operations.
- Containerized application environments using Docker and orchestrated AWS deployments, sustaining 99.9% uptime during peak retail traffic periods.

Professional Experience

Software Developer

Ourshopee (May 2025 - Till Date)

Ourshopee is a leading marketplace platform in the Middle East, offering a wide range of products and services.

Responsibilities

- Architect low-latency web services using Python and FastAPI, optimizing Elasticsearch mappings and MySQL query plans for high-concurrency e-commerce traffic, reducing average response time by 40%.
- Refactor legacy codebases applying SOLID principles, improving resource utilization and database query execution efficiency by 30%.
- Integrate regional payment gateways (Tamara, Tabby), ensuring secure, atomic transaction handling and webhook reconciliation across 7k+ daily transactions.

Software Developer

AurumWiseX (Aug 2023 - Oct 2024)

WiseX is India's first and largest neo-realty investment platform by Aurum PropTech.

Responsibilities

- Deployed scalable microservices using Python and FastAPI, optimizing data handling and resource isolation to support 8k+ concurrent users.
- Integrated Razorpay Smart Collect APIs for automated payment reconciliation via virtual accounts and UPI workflows, processing 50k+ in monthly transaction volume.
- Executed continuous performance tuning, refactoring core processing logic and optimizing relational database schemas, improving query performance by 25%.

Software Developer

GreenHonchos (Dec 2020 - Jul 2023)

GreenHonchos is a full-stack D2C enabler, an e-commerce agency providing end-to-end solutions for D2C brands, including digital branding.

Responsibilities

Swoopos — Mobile POS Transaction System

- Engineered low-latency REST APIs for a mobile Point-of-Sale (POS) system, prioritizing transaction integrity and fault-tolerant data synchronization across 1k+ devices.
- Modeled dynamic NoSQL schemas in MongoDB to manage complex inventory and transaction ledgers, supporting real-time reconciliation.

TUMI — Microservices Migration & Multi-Platform Synchronization

- Led the migration from a monolithic architecture to microservices using Python and FastAPI, decomposing core services for independent scalability and deployment.
- Optimized relational database schemas to handle varied product catalogs, high-concurrency checkouts, and multi-platform (web/mobile) inventory synchronization.
- Configured DNS routing and traffic management using AWS Route53, reducing latency and improving platform reliability to 99.9%.

Hunkemöller India — Cross-Platform API Architecture

- Delivered APIs and database schema for a new e-commerce platform from inception, built with Python and FastAPI microservices to ensure seamless integration across web and mobile clients via Next.js.
- Designed secure, modular API endpoints adhering to SOLID principles, incorporating strict data validation and global error handling to support the ReactJS frontend.

Manish Malhotra — Greenfield Couture E-Commerce Architecture

- Spearheaded end-to-end API and database architecture for a high-impact couture e-commerce project, built on Node.js and Laravel/Lumen.
- Configured AWS Route53 DNS routing and integrated a Next.js frontend to support a performant luxury retail storefront.

Ritu Kumar — Fashion E-Commerce Schema Design

- Designed API and database schema from the ground up, establishing the core architecture for a fashion e-commerce platform on Node.js.
- Managed AWS Route53 DNS configuration alongside Next.js frontend integration to support scalable, multi-region access.

Education

Bachelor of Computer Applications

Jamia Hamdard University, Delhi

2012 - 2015

Senior Secondary Education

QIC, U.P.

2010 - 2012

- Directed technical requirements gathering and system design, leading a cross-functional engineering team of 8 through the full software development lifecycle.
- Spearheaded the architecture of scalable RESTful APIs for D2C e-commerce platforms supporting 500+ brand storefronts, enforcing strict separation of concerns.
- Implemented security protocols, including payload encryption, JWT/OAuth2 access controls, and secure coding standards, reducing security vulnerabilities by 40%.

Sr. Software Developer

PS QuickIT (Aug 2019 - Dec 2020)

Responsibilities

- Developed and maintained core API endpoints for high-traffic e-commerce platforms, ensuring low latency and 99.9% uptime.
- Improved application security and runtime performance through collaborative code reviews and system audits, resolving 10+ critical issues.

Software Developer

Lexx Digital (Oct 2018 - Aug 2019)

Responsibilities

- Built scalable REST APIs for mobile and web clients, implementing foundational security and data validation layers supporting 40k+ active users.
